Skills

- Language:** JavaScript, Typescript, Python | *familiar with:* Java, PHP
- Framework:** Nodejs, Express.js, NestJs | *familiar with:* Flutter, React
- Database:** PostgreSQL, MySQL, MongoDB, Redis
- Tools:** Docker, Git, RabbitMQ, CI/CD, AWS, Kubernetes
- Practices:** Microservices, TDD, Agile, OOP, SOLID

Experience

Senior Backend Developer

Sayburgh Solutions LTD - Dhaka, Bangladesh

Jul 2023 – present

- Implementing features like access controls, multimedia integration, secure authentication, and API design using NestJS.
- Dockerized** projects from scratch to ensure consistent development environments.
- Developed **microservices** for POS and CRM systems, emphasizing API design, payment gateway integration, and **RabbitMQ** communication. Managed project structure, and implemented email verification and token authentication.
- Implemented features based on client requirements in **agile** development environment.
- Optimized** database queries to enhance transaction speed and improve user performance.
- Conducted code reviews, optimized code quality, and facilitated knowledge exchange within the team.

Software Developer

Lexoro GmbH - Mannheim, Germany

April 2021 – April 2023

- Developed web crawlers using **Node.js** and **Python** to automate data collection and create unified data models.
- Designed and implemented REST APIs and business logic using **Node.js** and **Spring Boot** for seamless integration with web applications, as well as frontend features in **Flutter**.
- Collaborated with cross-functional teams to enhance user experience by implementing new features and optimizing the interface.
- Improved application performance by **optimizing code**, eliminating bottlenecks, and ensuring efficient data processing.
- Conducted comprehensive unit and integration testing to maintain high application reliability and quality.
- Participated in agile practices, including daily stand-ups and sprint planning, to ensure efficient and timely project delivery.

Projects

Somoyer School | **NestJs, MongoDB, Redis, Docker**

- Developed and maintained the backend architecture using NestJS, ensuring scalable and efficient server-side operations.
- Designed and implemented RESTful APIs for key functionalities, including lesson unlocking, assignment submission, token-based authorization/authentication, promo code management, QR code generation, certificate creation, and more features.
- Integrated MongoDB as the primary database, optimizing queries for improved performance and data handling.
- Implemented the SSLCOMMERZ payment gateway to enhance payment security and enable online payment processing.
- Collaborated closely with frontend developers to ensure smooth and seamless API integration.

B2C Online Food Delivery Platform | **NestJs, MongoDB, Redis, Microservice, RabbitMQ, Docker**

- Developed the foundational project architecture using NestJS with a microservices-based approach, implemented features such as authentication, authorization, role-based access control, guards, two-step tokenized verification, and client API design.
- Write optimized query for data transactions and ensured data integrity through pagination.
- Wrote Dockerfile to ensure consistent environments for development and production.
- Leveraged RabbitMQ for reliable inter-service communication, ensuring efficient message delivery across services.

Livestock related system | **Nodejs, Nestjs, mongoDB, Redis, bKash payment gateway, Docker**

- Designed and developed the backend architecture for a livestock payment calculation platform using NestJS and MongoDB, focusing on scalability and performance optimization.
- Implemented RESTful APIs for key functionalities such as payment execution, user management, and data retrieval.
- Integrated secure payment processing with bKash payment gateway, including OTP verification and role-based access control.
- Dockerized the application to ensure consistent deployment environments, optimized the codebase for maintainability, and collaborated with frontend developers for seamless API integration.

Meda-X | **Nodejs, Spring-Boot, Flutter, PostgreSQL, Redis, Cheerio, Docker**

- Built web crawlers with Node.js and Cheerio to scrape data, managing records in Redis and storing in PostgreSQL.
- Designed REST APIs and implemented business logic in Spring Boot to efficiently serve data to the Flutter frontend.
- Wrote optimized SQL queries to ensure smooth data transactions and improve system performance.
- Collaborated with the frontend team for seamless backend integration, and gained Flutter experience to add features when a dedicated frontend developer was unavailable.

Education

American International University – Bangladesh (AIUB)

- BSc. in Computer Science & Engineering

Dhaka, Bangladesh

2017 – 2021
